

Tech Brief

Part Number: 7014544

High Efficiency Parallel Flow
Style Condenser

Low Efficiency Serpentine
Style Condenser

Figure 1

NOTE: The replacement condenser in this carton has been designed using the latest leading edge technology in AC condenser design. For this reason, your new high efficiency parallel flow condenser (see Figure 1) will look different and be sized differently than some of the original condensers which are low efficient serpentine style condensers. The same mounting points and connections in the vehicle, however, are utilized by your new condenser. Although the core thickness and the construction of your new replacement condenser may be different from the original, your new replacement condenser meets or exceeds the performance characteristics of the original condenser.
